

OVERVIEW:

- Strong southerly winds late today and this evening as a strengthening storm tracks west of New England with a cold front crossing tonight.
- Strong west winds behind a cold front tonight and Thursday.
- Widespread rainfall and snowmelt could cause stream rises and ice movement.

TIMING

- On and off rain today.
- Southerly winds increase today and become strong late afternoon and evening.
- Winds switch to west this evening and gust up to 50 MPH, then continue into Thursday.

HAZARDS & IMPACTS

- [Wind Advisory](#) issued for the entire CWA.
- Flood Watch issued for Northwestern [Maine](#) and Northern [New Hampshire](#) where snowmelt and rainfall could cause stream rises and small stream, urban, and ice jam flooding.
- Power outages are possible due to strong winds. The greatest chance for this will be tonight into Thursday.
- Possible squall line this evening could bring isolated damaging winds.

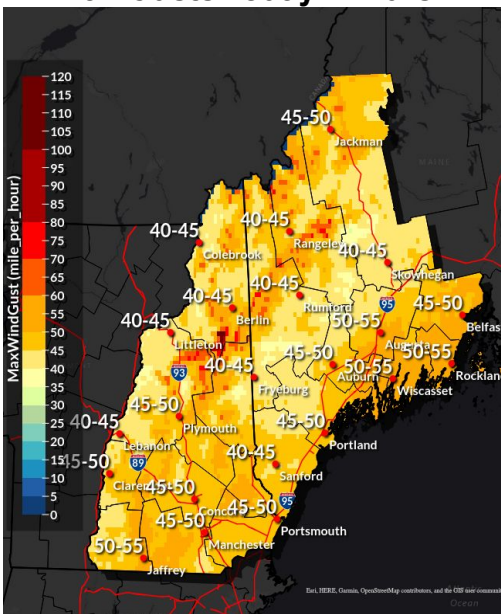

ADDITIONAL INFORMATION

- A quick change to snow showers is likely as temperatures quickly fall below freezing tonight. Standing water will freeze. Icy roads possible late tonight and Thu AM.
