

# Remnants of Beryl Arrive Today

July 10, 2024  
5:16 AM

## Elevated Severe and Flood Threat

### OVERVIEW

- The remnants of Beryl will bring a tropical-like airmass to the region later today into tonight.
- Flash flooding and severe storms with damaging winds will be the main concerns.

**TIMING**

- Greatest flood threat exists from this afternoon through Thursday morning.
- Greatest severe threat is from midday through this evening

**FLOOD RELATED HAZARDS & IMPACTS**

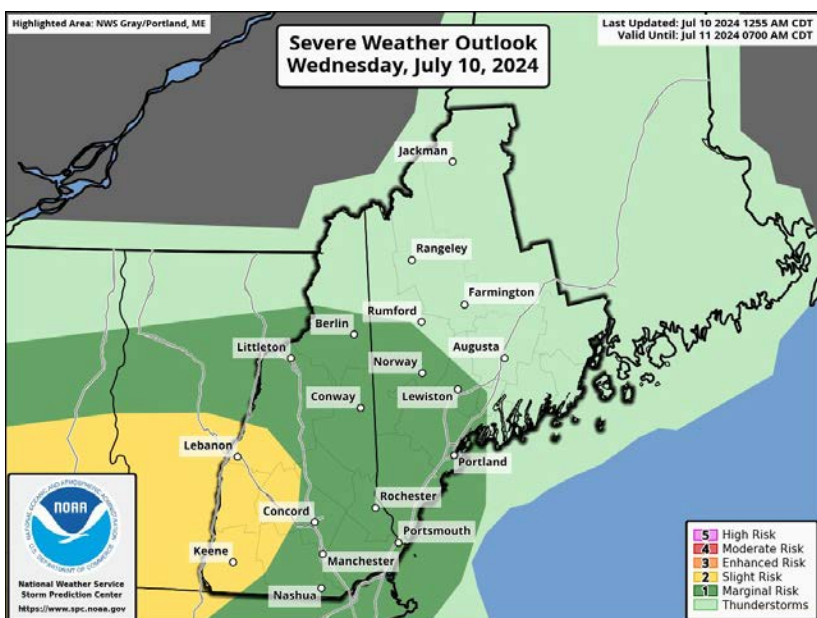

- A **Flood Watch** is in effect for most counties in Maine and New Hampshire where 1 to 3 inches of rain, locally up to 5 inches is possible.
- WPC issued a rare **Moderate Risk** for excessive rainfall and rapid onset flooding (Level 3 of 4) for the White Mountains region of New Hampshire. There is a **Slight Risk** (Level 2 of 4) all remaining areas.
- Considerable impacts are possible for areas with repeating activity. Highest threat areas are those that have been primed by recent storms as well as highly sloped, fast-responding small streams.
- River flooding is not expected, however rapid rises are likely to occur. Campers and recreational users along riverbanks should closely monitor conditions, especially Wednesday night through Thursday.
- More information can be found on the [NWS Gray EM Flood Page](#)

**SEVERE RELATED HAZARDS & IMPACTS**

- There is a **Slight Risk** of Severe Thunderstorms (Level 2 of 5) for far western New Hampshire counties and a Marginal Risk for the remainder of New Hampshire into western Maine.
- The primary hazard is damaging winds. A couple tornadoes may be possible.
- More information can be found on the [NWS Gray EM Severe Page](#)

**NEXT BRIEFING** This will be the last briefing unless significant changes are made this afternoon.
