

# Flood Watch Tonight through Thursday

March 6, 2024

10:42 AM

## Widespread Rainfall and Interior Snowmelt Expected

### OVERVIEW:

- Minor flooding possible as moderate to heavy rain moves in tonight and tomorrow
- Widespread amounts of 1-2" with the potential for higher amounts along the coast
- The heaviest rain will fall in the south, however the extra contribution of snowmelt will expand the flood threat into the White Mountains and Maine Lakes Region

### TIMING

- Widespread rainfall this evening into Thursday with the potential for snow in the higher elevations of the mountains
- The heaviest rain will occur this evening through late morning Thursday

### HAZARDS & IMPACTS

- Excessive runoff may result in flooding of small streams, and other low-lying and flood-prone locations.
- Localized flash flooding is possible in steep terrain and/or urban areas.
- Travel disruptions are possible due to localized flooded roads in low lying areas, particularly during the morning commute.
- There is a high probability that some rivers will reach minor flood impacts, with a 10% chance or less of reaching moderate flood levels.

### ADDITIONAL INFORMATION

- Ice threat is now gone, with some weak ice flows remaining on mountain rivers the remainder of the week, ice jams not expected.
- A complex storm system later this weekend could cause additional river rises and renewed flood concerns.
- Please monitor the latest river forecast [here](#).
